TECHNICAL FOCUS

Node.js & TypeScript Cross-Platform Development

AWS Infrastructure (IaC) AI Agent Orchestration

React & Frontend Systems Security & DevOps

Database Architecture Developer Tooling & Automation

LANGUAGES

English (Fluent/C1)

Armenian (Native)

Russian (Fluent/C1)

SUMMARY

Senior full-stack engineer with 11 years building Node.js/TypeScript platforms, Electron apps, and AWS-backed systems used at production scale. Technical leader across distributed teams, with measurable impact on API latency, uptime, deployment stability, and high-volume data ingestion. Currently building an AI-native IDE platform that helps developers coordinate multiple coding agents, reuse AI workflows, and validate generated changes before they reach the codebase. Seeking senior Node.js, infrastructure-heavy backend, or engineering leadership roles.

KEY ACHIEVEMENTS

- Optimized API performance, reducing average response time from 900ms to 450ms through strategic caching and query optimizations.
- Built automated ingestion pipelines processing 90K+ job listings daily from 50+ sources with 99.7% accuracy.
- Reduced platform downtime by 40% through proactive monitoring, incident prevention, and rapid response workflows.
- Reduced failed deployments by 60% and prevented 8 credential exposures through CI enforcement, secrets scanning, and custom Git hooks across 12 repositories.
- Architected a provider-agnostic multi-agent development system coordinating 7 parallel agents, accelerating delivery by 30% while maintaining 85%+ test coverage and reducing AI compute cycles by 86%.

CORE SKILLS

Languages: JavaScript/TypeScript, PHP, Python, SQL	Frontend: React, HTML, CSS (Sass/SCSS), Vite, Webpack
Backend: Node.js, Express, NestJS, Laravel	Desktop & Mobile: Electron.js (5 yrs), CapacitorJS
Cloud & DevOps: AWS (RDS, S3, CloudFront, Route53, SES, ACM, IAM, Lambda, API Gateway, EC2, Elastic Beanstalk), Terraform, Docker, Nginx, Linux	Data & Caching: MySQL, PostgreSQL, MongoDB, Redis, Memcached
AI Orchestration: Multi-agent systems, provider-agnostic agent workflows, prompt-template systems, AI coding CLIs, task distribution, validation gates	Quality & Security: Jest, PHPUnit, Puppeteer, E2E testing, secrets scanning, OWASP-aligned reviews
CI/CD & Tooling: Jenkins, GitHub Actions, Git, Jira, Postman	Platform Engineering: Architecture reviews, observability, automation, runbooks, developer tooling

EXPERIENCE

Ringier South Africa (Pty) Ltd	June 2021 - Present
<i>Senior Full-Stack Engineer / Software Architect - Remote/Yerevan</i>	
• Build and evolve multi-domain job platforms with employer self-service (ATS integration, admin dashboards) - deliver features across Laravel/React. • Implemented fully automated daily ingestion handling 90K+ job listings from 50+ sources via RSS and AWS S3 feeds, with automatic expiration, de-duplication, validation, and monitoring. • Security hardening: rotated credentials, prevented incidents, improved audit posture. • Built data integrity checks and E2E validation for ingestion - reduced noisy failures. • Built provider-agnostic AI development automation enabling multiple coding agents to work in parallel across implementation, testing, documentation, and refactoring - accelerating delivery by 30%.	
MyJobs Myanmar	Jun 2018 - Jun 2021
<i>Software Architect and Lead Back End Developer</i>	
• Led backend architecture for high-traffic job platform handling 2M+ requests/day - directed 4 engineering teams across 3 time zones. • Built Node.js APIs and services - designed performant PostgreSQL schemas with focus on scalability. • Operated AWS workloads (Lambda, API Gateway, EC2, RDS, S3, CloudFront) - added monitoring and alerting. • Introduced structured testing and CI pipelines - improved release confidence. • Mentored engineers through code reviews and pair programming. • Participated in hiring: defined roles, designed technical interviews, conducted assessments.	

Inforuptcy

Jul 2016 - Jan 2018

Front End Developer

- Built React/Redux features and reusable UI components - collaborated with backend on API contracts.
- Established modern front-end tooling (Webpack/Babel) and improved accessibility and maintainability.

Simply Technologies

Jun 2015 - Jul 2016

Full Stack Developer

- Implemented RESTful services in Node.js/Express with MongoDB integration.
- Contributed across multiple front-end stacks (React, Angular, Knockout) and build systems.

LinguaCode (startup)

May 2015 - Sep 2020

Founder, Full-Stack Developer

- Founded multilingual social coding platform enabling children to learn programming in their native language.
- Shipped cross-platform desktop app (forked Notepad++) and React web app.
- Ran pilot cohorts with 100+ students across 3 schools.

Shirak Technologies

Jun 2014 - Jan 2015

SAP Basis Administrator

- Supported SAP Basis operations, taught JavaScript, handled sysadmin tasks.

EDUCATION

State Engineering University of Armenia (Polytechnic)

Sep 2012 - May 2014

Applied Mathematics and Informatics - Yerevan

BSc coursework, Applied Mathematics & Informatics

SIDE PROJECTS

AI-Native IDE Platform (2025-Present)

Built a production-grade Electron IDE for AI-assisted development, focused on making multi-agent coding workflows practical, secure, and repeatable for real projects. Designed provider-agnostic agent orchestration with account-aware sessions, reusable prompt workflows, task launch flows, and session continuity across major AI coding tools. Added a secure plugin architecture, workspace extensions, automated code validation, remediation prompts, and performance profiling so developers can catch AI-generated regressions before they reach the codebase.

Tech: Electron.js, Node.js, TypeScript, React, Vite, secure desktop architecture, AI agent orchestration, plugin architecture, quality automation, performance profiling

Custom Handwriting Font Generator (2025-Present)

Cross-platform Electron app for generating personalized Armenian handwritten fonts with configurable weights, automatic kerning, real-time preview, batch processing, and FontForge/Inkscape export automation.

Multi-Agent AI Orchestration Achievement: Coordinated 7 agents to automate 2,075 documentation tasks across 213 TypeScript/React files with balanced task distribution and validation workflows. Reduced compute cycles by 86%, improved throughput 7x, and lifted AI code generation quality by 40-60%.

Tech: Electron.js, Node.js, React, TypeScript, FontForge CLI, Inkscape CLI, Python, Bash

Brain-Computer Interface Research Platform (2024-Present)

Experimental neurotechnology platform for real-time brain activity monitoring using OpenBCI Cyton + Daisy 16-channel EEG. Built Electron desktop app for real-time EEG visualization with Node.js backend integrating Python/Brainflow for biosignal acquisition. Real-time streaming of 16-channel neural data at 250Hz. Research directions include attention/focus detection, meditation monitoring, and neurofeedback mechanisms.

Tech: Electron.js, Node.js, React, Python, Brainflow, OpenBCI, Signal Processing, WebSockets, ML

Customs Declaration Automation Tool (2024)

Intelligent document processing Electron app using AI-assisted PDF parsing for invoices, bank confirmations, and passports, plus HS code calculation and automated form filling across 15+ customs documents. Multi-agent workflow with specialized validation steps reduced customs declaration time from 8 hours to 15 minutes per shipment.

Tech: Electron.js, Node.js, AI-assisted document parsing, Puppeteer, PDF parsing
